

In the Abstract:

Please replace the Abstract with the following amended Abstract:

A liquid crystal display device ~~comprises:~~ includes a display circuit ~~including~~ having data lines and scanning lines arranged in a two-dimensional matrix, and switching elements connected between the data lines and the scanning lines; ~~a.~~ A first inspection circuit is also provided, including an inspection voltage input and/or output terminal for inputting and/or outputting an inspection voltage to/from one ~~end~~ ends of the data ~~line~~ lines via a first analog switch; ~~and a.~~ A second inspection circuit ~~including~~ includes an inspection voltage input and/or output terminal for inputting and/or outputting an inspection voltage to/from the other ~~end~~ ends of the data ~~line~~ lines. The display circuit, the first inspection circuit, and the second inspection circuit are provided on one substrate, and the first inspection circuit is ~~separable~~ constructed to be separated from the rest of the display circuit.
